YOUR PARTNER IN PREVENTING HEALTHCARE-ASSOCIATED INFECTIONS (HAIs) AND ANTIBIOTIC RESISTANCE.

#PublicHealthProtects

Unites the healthcare and public health communities, as well as patients and the general public, in a common goal of reducing and preventing HAIs, including antibiotic-resistant infections.

Develops public health-healthcare networks for coordinated HAI prevention and response plans, and provides data to shape national, state, and local prevention and response efforts.

Detects and responds to HAI and antibiotic-resistant threats in state, local, and territorial areas, and provides technical expertise for outbreak response.

Collaborates with public health, healthcare, and academic partners to develop, refine, and implement HAI prevention and antibiotic stewardship strategies.

Serves as a central resource hub for credible, up-to-date, evidence-based information for HAI awareness, prevention, and outbreak response.

TOGETHER, PUBLIC HEALTH:

Develops public health-healthcare networks for coordinated HAI prevention and response plans, and provides data to shape national, state, and local prevention and response efforts.

Collaborates with public health, healthcare, and academic partners to develop, refine, and implement HAI prevention and antibiotic stewardship strategies.

Serves as a central resource hub for credible, up-to-date, evidence-based information for HAI awareness, prevention, and outbreak response.

HAIs AND ANTIBIOTIC RESISTANCE IN THE UNITED STATES

HAIs are infections people contract while receiving medical care. Some HAIs can be caused by antibiotic-resistant bacteria. HAIs pose a serious threat to patients across the country. Although much progress has been made to reduce and prevent HAIs, including antibiotic-resistant infections,

THERE IS STILL MORE TO DO.

Approximately 1 IN 31 hospital patients has at least one HAI on any given day.1

More than 2 MILLION illnesses and at least 23,000 deaths are caused each year by antibiotic-resistant bacteria in the United States.2

HAIs result in up to $33 BILLION in excess medical costs for the U.S. healthcare system every year.3
